Module Information

❖ Contribution in Course Outcome:

- CO3: Find Eigen values, Eigen vectors of a matrix, apply Cayley-Hamilton theorem, diagonalise a matrix and find functions of square matrices.

❖	Matrix Theory: Eigen values & Eigen vectors	12	CO 3
3.1	Characteristic equation, Eigen values and Eigen vectors, Properties of eigen values and eigen vectors		
3.2	Statement of Cayley-Hamilton theorem, Examples based on verification and application of Cayley-Hamilton theorem		
3.3	Similarity of matrices, Diagonalisation of a matrix		
3.4	Functions of square matrix, Derogatory and non-derogatory matrices, Minimal polynomial		

Interesting Facts!!

- ❖ Borrowed from German eigen : “own”, “proper, characteristic”
- ❖ Other names for Eigenvalues: Proper values/ Latent Values/ Characteristic Values, Characteristic roots, Latent roots
- ❖ Arose in the study of quadratic forms and differential equations.
- ❖ In the 18th century Leonhard Euler studied the rotational motion of a rigid body and discovered the importance of the principal axes. Joseph-Louis Lagrange realized that the principal axes are the eigenvectors of the inertia matrix.

Applications

- ❖ **Google's PageRank** : Search engines & keyword search
- ❖ **Stability**: In mechanical engineering and architecture:
Designing Bridges (The natural frequency of the bridge is the eigenvalue of smallest magnitude of a system that models the bridge.
Watch: The video on the collapse of the Tacoma Narrow Bridge which was built in 1940.)
- ❖ **Electronics**: RLC circuits
- ❖ **Image Processing**
- ❖ **Communication systems**: Eigenvalues were used to determine how much information can be transmitted through a communication medium like your telephone line or through the air.

Applications

- ❖ Eigenvalues give the **displacement** of an atom or a molecule from its equilibrium position and the **direction of displacement** is given by eigenvectors (after applying force)
- ❖ In physics, eigenvectors are **inertia tensor** and eigenvalues are **moment of inertia**.
- ❖ **Designing car stereo system:** Eigenvalue analysis is also used in the design of the car stereo systems, where it helps to reproduce the vibration of the car due to the music.
- ❖ **Electrical Engineering:** The application of eigenvalues and eigenvectors is useful for decoupling three-phase systems through symmetrical component transformation.

Find Out!! (LMS discussion)

❖ Applications of Eigenvalues and Eigenvectors in...

- Google page ranking (Google's use of eigenvalues and eigenvectors)
- Machine Learning, Machine Intelligence
- Oil extraction
- Data Analytics
- TV: (2D to 3D & 3D to 2D convergence)
- Area you are interested in

Eigen Values & Eigen Vectors

❖ **Formal Definition:** Let A be an $n \times n$ matrix.

➤ An **eigenvector** of A is a *nonzero* vector x in R^n such that $Ax = \lambda x$, for some scalar λ .

➤ An **eigenvalue** of A is a scalar λ such that the equation $Ax = \lambda x$ has a *nontrivial* solution.

❖ **Definition 2:** Roots of Characteristic equation of a square matrix is called the characteristics roots / latent roots / characteristic values/ eigen values / proper values of the matrix. ie. Eigenvalues of matrix are roots of $|A - \lambda I| = 0$

If λ_1 is one of the eigenvalues of square matrix A then eigenvector (X) corresponding to λ_1 is given by $[A - \lambda_1 I] X = 0$.

Concept Check: True or False (Chatbox)

❖ **A is 2×3 Matrix. Its eigenvalues can be 2 & 3.**

➤ (False): Only square matrix possess eigenvalues.

❖ **A is 2×2 Matrix. It can have 3 different eigenvalues.**

➤ (False): A square matrix of order n will have at the most n eigenvalues.

❖ **A is 3×3 matrix. It must have 3 different eigenvalues.**

➤ (False): Matrix of order n will have exactly n numbers of eigenvalues (may be distinct or repeated)

❖ **A is matrix can have complex eigenvalues?**

➤ (True): Matrix may have complex eigenvalues.

Train your brain !!

- ❖ Can a square matrix have no eigenvalues?
- ❖ Can a real matrix have complex eigenvalues?
- ❖ What is the Geometrical Interpretation of eigenvalues and eigenvectors?

Answers of the above questions opens the door for Linear algebra. A theoretical concept of Field, domain codomain, transformations etc. are involved in.

Calculate Eigenvalues & Eigenvectors

❖ **Steps to be followed:** A-square matrix of order n , I identity matrix of order n , λ any scalar (eigenvalue to be determined), X column vector of order n (eigenvector to be determined)

- **Find Characteristic Matrix:** $A - \lambda I$
- **Find Characteristic equation:** $|A - \lambda I| = 0$
- **Solve Characteristic equation and find its roots.**
(roots are called eigenvalues)
- **For each eigenvalue,** solve $[A - \lambda I] X = 0$ to determine nonzero column vector X .

Find Eigenvalues and Eigenvector

Ex.1 Find the eigenvalues and eigenvectors of matrix A.

$$A = \begin{bmatrix} 2 & 1 \\ 1 & 2 \end{bmatrix}$$

Find Eigenvalues and Eigenvector

Ex.1 Find the eigenvalues and eigenvectors of matrix A.

$$A = \begin{bmatrix} 2 & 1 \\ 1 & 2 \end{bmatrix}$$

Taking the determinant to find characteristic polynomial A-

Find Eigenvalues and Eigenvector

Ex.1 Find the eigenvalues and eigenvectors of matrix A.

$$A = \begin{bmatrix} 2 & 1 \\ 1 & 2 \end{bmatrix}$$

Taking the determinant to find characteristic polynomial A-

Ch. eq $|A - \lambda I| = 0 \Rightarrow$

Find Eigenvalues and Eigenvector

Ex.1 Find the eigenvalues and eigenvectors of matrix A.

$$A = \begin{bmatrix} 2 & 1 \\ 1 & 2 \end{bmatrix}$$

Taking the determinant to find characteristic polynomial A-

Ch. eq $|A - \lambda I| = 0 \Rightarrow$ $\begin{vmatrix} 2-\lambda & 1 \\ 1 & 2-\lambda \end{vmatrix} = 0$

Find Eigenvalues and Eigenvector

Ex.1 Find the eigenvalues and eigenvectors of matrix A.

$$A = \begin{bmatrix} 2 & 1 \\ 1 & 2 \end{bmatrix}$$

Taking the determinant to find characteristic polynomial A-

Ch. eq $|A - \lambda I| = 0 \Rightarrow$ $\begin{vmatrix} 2-\lambda & 1 \\ 1 & 2-\lambda \end{vmatrix} = 0$

$$\Rightarrow 3 - 4\lambda + \lambda^2 = 0$$

Find Eigenvalues and Eigenvector

Ex.1 Find the eigenvalues and eigenvectors of matrix A.

$$A = \begin{bmatrix} 2 & 1 \\ 1 & 2 \end{bmatrix}$$

Taking the determinant to find characteristic polynomial A-

Ch. eq $|A - \lambda I| = 0 \Rightarrow \begin{vmatrix} 2-\lambda & 1 \\ 1 & 2-\lambda \end{vmatrix} = 0$

$\Rightarrow 3 - 4\lambda + \lambda^2 = 0$ **Find roots of Ch. eq.**

Find Eigenvalues and Eigenvector

Ex.1 Find the eigenvalues and eigenvectors of matrix A.

$$A = \begin{bmatrix} 2 & 1 \\ 1 & 2 \end{bmatrix}$$

Taking the determinant to find characteristic polynomial A-

Ch. eq $|A - \lambda I| = 0 \Rightarrow \begin{vmatrix} 2-\lambda & 1 \\ 1 & 2-\lambda \end{vmatrix} = 0$

$\Rightarrow 3 - 4\lambda + \lambda^2 = 0$ **Find roots of Ch. eq.**

It has roots at $\lambda = 1$ and $\lambda = 3$, which are the two eigenvalues of A.

By Defination

Eigen vector for $\lambda=1$

Eigenvectors \mathbf{x} of this transformation satisfy the equation,

$$A\mathbf{x} = \lambda\mathbf{x}$$

Eigen vector for $\lambda=1$

Eigenvectors \mathbf{x} of this transformation satisfy the equation,

$$A\mathbf{x} = \lambda\mathbf{x}$$

Rearrange this equation to obtain-

$$(A - \lambda I)\mathbf{x} = 0$$

Eigen vector for $\lambda=1$

Eigenvectors \mathbf{x} of this transformation satisfy the equation,

$$A\mathbf{x} = \lambda\mathbf{x}$$

Rearrange this equation to obtain-

$$(A - \lambda I)\mathbf{x} = 0$$

For $\lambda = 1$, Equation becomes,
$$(A - I)\mathbf{x} = 0$$

Eigen vector for $\lambda=1$

Eigenvectors \mathbf{x} of this transformation satisfy the equation,

$$A\mathbf{x} = \lambda\mathbf{x}$$

Rearrange this equation to obtain-

$$(A - \lambda I)\mathbf{x} = 0$$

For $\lambda = 1$, Equation becomes,

$$(A - I)\mathbf{x} = 0$$

$$\begin{bmatrix} 1 & 1 \\ 1 & 1 \end{bmatrix} \begin{bmatrix} \mathbf{x}_1 \\ \mathbf{x}_2 \end{bmatrix} = \begin{bmatrix} 0 \\ 0 \end{bmatrix}$$

Solve This System of Equation

Eigen vector for $\lambda=1$

Eigenvectors \mathbf{x} of this transformation satisfy the equation,

$$A\mathbf{x} = \lambda\mathbf{x}$$

Rearrange this equation to obtain-

$$(A - \lambda I)\mathbf{x} = 0$$

For $\lambda = 1$, Equation becomes,

$$(A - I)\mathbf{x} = 0$$

$$\begin{bmatrix} 1 & 1 \\ 1 & 1 \end{bmatrix} \begin{bmatrix} \mathbf{x}_1 \\ \mathbf{x}_2 \end{bmatrix} = \begin{bmatrix} 0 \\ 0 \end{bmatrix}$$

Eigen vector for $\lambda=1$

Eigenvectors \mathbf{x} of this transformation satisfy the equation,

$$A\mathbf{x} = \lambda\mathbf{x}$$

Rearrange this equation to obtain-

$$(A - \lambda I)\mathbf{x} = 0$$

Method 1: Reduce to echelon form

For $\lambda = 1$, Equation becomes,

$$(A - I)\mathbf{x} = 0$$

$$\begin{bmatrix} 1 & 1 \\ 1 & 1 \end{bmatrix} \begin{bmatrix} \mathbf{x}_1 \\ \mathbf{x}_2 \end{bmatrix} = \begin{bmatrix} 0 \\ 0 \end{bmatrix}$$

Eigen vector for $\lambda=1$

Eigenvectors \mathbf{x} of this transformation satisfy the equation,

$$A\mathbf{x} = \lambda\mathbf{x}$$

Rearrange this equation to obtain-

$$(A - \lambda I)\mathbf{x} = 0$$

For $\lambda = 1$, Equation becomes,
 $(A - I)\mathbf{x} = 0$

$$\begin{bmatrix} 1 & 1 \\ 1 & 1 \end{bmatrix} \begin{bmatrix} x_1 \\ x_2 \end{bmatrix} = \begin{bmatrix} 0 \\ 0 \end{bmatrix}$$

Method 1: Reduce to echelon form

$R_2 - R_1$

$$\begin{bmatrix} 1 & 1 \\ 0 & 0 \end{bmatrix} \begin{bmatrix} x_1 \\ x_2 \end{bmatrix} = \begin{bmatrix} 0 \\ 0 \end{bmatrix}$$

Eigen vector for $\lambda=1$

Eigenvectors \mathbf{x} of this transformation satisfy the equation,

$$A\mathbf{x} = \lambda\mathbf{x}$$

Rearrange this equation to obtain-

$$(A - \lambda I)\mathbf{x} = 0$$

For $\lambda = 1$, Equation becomes,
 $(A - I)\mathbf{x} = 0$

Method 1: Reduce to echelon form

$R_2 - R_1$

$$\begin{bmatrix} 1 & 1 \\ 0 & 0 \end{bmatrix} \begin{bmatrix} x_1 \\ x_2 \end{bmatrix} = \begin{bmatrix} 0 \\ 0 \end{bmatrix}$$

n = no. of variable
= 2
 r = no. of distinct
Equations/ Rank of echelon
form
= 1
 $\therefore n-r = 1$ LI eigenvector

$$\therefore x_1 + x_2 = 0$$

$$\therefore x_1 = -x_2$$

Eigen vector for $\lambda=1$

Eigenvectors \mathbf{x} of this transformation satisfy the equation,

$$A\mathbf{x} = \lambda\mathbf{x}$$

Rearrange this equation to obtain-

$$(A - \lambda I)\mathbf{x} = 0$$

For $\lambda = 1$, Equation becomes,
 $(A - I)\mathbf{x} = 0$

$$\begin{bmatrix} 1 & 1 \\ 1 & 1 \end{bmatrix} \begin{bmatrix} x_1 \\ x_2 \end{bmatrix} = \begin{bmatrix} 0 \\ 0 \end{bmatrix}$$

Method 1: Reduce to echelon form

$R_2 - R_1$

$$\begin{bmatrix} 1 & 1 \\ 0 & 0 \end{bmatrix} \begin{bmatrix} x_1 \\ x_2 \end{bmatrix} = \begin{bmatrix} 0 \\ 0 \end{bmatrix}$$

$$\therefore x_1 + x_2 = 0$$

$$\therefore x_1 = -x_2$$

Put $x_2 = t \therefore x_1 = -t$

Eigen vector for $\lambda=1$

Eigenvectors \mathbf{x} of this transformation satisfy the equation,

$$A\mathbf{x} = \lambda\mathbf{x}$$

Rearrange this equation to obtain-

$$(A - \lambda I)\mathbf{x} = 0$$

For $\lambda = 1$, Equation becomes,
 $(A - I)\mathbf{x} = 0$

$$\begin{bmatrix} 1 & 1 \\ 1 & 1 \end{bmatrix} \begin{bmatrix} x_1 \\ x_2 \end{bmatrix} = \begin{bmatrix} 0 \\ 0 \end{bmatrix}$$

Method 1: Reduce to echelon form

$R_2 - R_1$

$$\begin{bmatrix} 1 & 1 \\ 0 & 0 \end{bmatrix} \begin{bmatrix} x_1 \\ x_2 \end{bmatrix} = \begin{bmatrix} 0 \\ 0 \end{bmatrix}$$

$$\therefore x_1 + x_2 = 0$$

$$\therefore x_1 = -x_2$$

Put $x_2 = t \therefore x_1 = -t$

$$\text{Eigenvector } \mathbf{x} = \begin{bmatrix} x_1 \\ x_2 \end{bmatrix} = \begin{bmatrix} -t \\ t \end{bmatrix}$$

$$\text{i.e. } \begin{bmatrix} -1 \\ 1 \end{bmatrix}$$

Eigen vector for $\lambda=1$

Eigenvectors \mathbf{x} of this transformation satisfy the equation,

$$A\mathbf{x} = \lambda\mathbf{x}$$

Rearrange this equation to obtain-

$$(A - \lambda I)\mathbf{x} = 0$$

For $\lambda = 1$, Equation becomes,
 $(A - I)\mathbf{x} = 0$

$$\begin{bmatrix} 1 & 1 \\ 1 & 1 \end{bmatrix} \begin{bmatrix} x_1 \\ x_2 \end{bmatrix} = \begin{bmatrix} 0 \\ 0 \end{bmatrix}$$

$$\mathbf{x} = \begin{bmatrix} 1 \\ -1 \end{bmatrix}$$

Method 1: Reduce to echelon form

$R_2 - R_1$

$$\begin{bmatrix} 1 & 1 \\ 0 & 0 \end{bmatrix} \begin{bmatrix} x_1 \\ x_2 \end{bmatrix} = \begin{bmatrix} 0 \\ 0 \end{bmatrix}$$

$$\therefore x_1 + x_2 = 0$$

$$\therefore x_1 = -x_2$$

Put $x_2 = t \therefore x_1 = -t$

$$\text{Eigenvector } \mathbf{x} = \begin{bmatrix} x_1 \\ x_2 \end{bmatrix} = \begin{bmatrix} -t \\ t \end{bmatrix}$$

$$\text{Or } \begin{bmatrix} -1 \\ 1 \end{bmatrix}$$

Find for Eigen vector for $\lambda=3$

For $\lambda = 3$, Equation becomes,

$$(A - 3I)u = 0$$

Find for Eigen vector for $\lambda=3$

For $\lambda = 3$, Equation becomes,

$$(A - 3I)u = 0$$

$$\begin{bmatrix} -1 & 1 \\ 1 & -1 \end{bmatrix} \begin{bmatrix} u_1 \\ u_2 \end{bmatrix} = \begin{bmatrix} 0 \\ 0 \end{bmatrix}$$

Solve This System of Equation

Find for Eigen vector for $\lambda=3$

For $\lambda = 3$, Equation becomes,

Method 2: Use of Algebraic Methods

$$(A - 3I)u = 0$$

$$\begin{bmatrix} -1 & 1 \\ 1 & -1 \end{bmatrix} \begin{bmatrix} u_1 \\ u_2 \end{bmatrix} = \begin{bmatrix} 0 \\ 0 \end{bmatrix}$$

Find for Eigen vector for $\lambda=3$

For $\lambda = 3$, Equation becomes,

$$(A - 3I)u = 0$$

$$\begin{bmatrix} -1 & 1 \\ 1 & -1 \end{bmatrix} \begin{bmatrix} u_1 \\ u_2 \end{bmatrix} = \begin{bmatrix} 0 \\ 0 \end{bmatrix}$$

Method 2: Use of Algebraic Methods

Rewriting matrix form to algebraic form,

$$\therefore -u_1 + u_2 = 0$$

$$u_1 - u_2 = 0$$

Find for Eigen vector for $\lambda=3$

For $\lambda = 3$, Equation becomes,

$$(A - 3I)u = 0$$

$$\begin{bmatrix} -1 & 1 \\ 1 & -1 \end{bmatrix} \begin{bmatrix} u_1 \\ u_2 \end{bmatrix} = \begin{bmatrix} 0 \\ 0 \end{bmatrix}$$

n = no. of variable
= 2

r = no. of distinct
Equations/ Rank of echelon
form

= 1

$\therefore n-r = 1$ LI eigenvector

Method 2: Use of Algebraic Methods

Rewriting matrix form to algebraic form,

$$\therefore -u_1 + u_2 = 0$$

$$u_1 - u_2 = 0$$

Both equations are same.

$$\therefore u_1 = u_2$$

Find for Eigen vector for $\lambda=3$

For $\lambda = 3$, Equation becomes,

$$(A - 3I)u = 0$$

$$\begin{bmatrix} -1 & 1 \\ 1 & -1 \end{bmatrix} \begin{bmatrix} u_1 \\ u_2 \end{bmatrix} = \begin{bmatrix} 0 \\ 0 \end{bmatrix}$$

Method 2: Use of Algebraic Methods

Rewriting matrix form to algebraic form,

$$\therefore -u_1 + u_2 = 0$$

$$u_1 - u_2 = 0$$

Both equations are same.

$$\therefore u_1 = u_2$$

Put $u_2 = t \therefore u_1 = t$

Find for Eigen vector for $\lambda=3$

For $\lambda = 3$, Equation becomes,

$$(A - 3I)u = 0$$

$$\begin{bmatrix} -1 & 1 \\ 1 & -1 \end{bmatrix} \begin{bmatrix} u_1 \\ u_2 \end{bmatrix} = \begin{bmatrix} 0 \\ 0 \end{bmatrix}$$

Method 2: Use of Algebraic Methods

Rewriting matrix form to algebraic form,

$$\therefore -u_1 + u_2 = 0$$

$$u_1 - u_2 = 0$$

Both equations are same.

$$\therefore u_1 = u_2$$

Put $u_2 = t \therefore u_1 = t$

$$\text{Eigenvector } u = \begin{bmatrix} u_1 \\ u_2 \end{bmatrix} = \begin{bmatrix} t \\ t \end{bmatrix}$$

Find for Eigen vector for $\lambda=3$

For $\lambda = 3$, Equation becomes,

$$(A - 3I)u = 0$$

$$\begin{bmatrix} -1 & 1 \\ 1 & -1 \end{bmatrix} \begin{bmatrix} u_1 \\ u_2 \end{bmatrix} = \begin{bmatrix} 0 \\ 0 \end{bmatrix}$$

Use your method to solve

which has the solution- $u = \begin{bmatrix} 1 \\ 1 \end{bmatrix}$

\therefore Eigenvalues of A are 1 and 3 with corresponding eigenvectors $\begin{bmatrix} 1 \\ -1 \end{bmatrix}$ and $\begin{bmatrix} 1 \\ 1 \end{bmatrix}$ respectively.

Don't forget to Write final answer

Practice Problems

Find the eigenvalues and eigenvectors of the following:

(Observe what new you are getting? Discuss on LMS)

$$\diamond A = \begin{bmatrix} -1 & 2 \\ 0 & -1 \end{bmatrix}$$

$$\diamond B = \begin{bmatrix} 2 & -1 \\ 1 & 2 \end{bmatrix}$$

Ex.2 Find eigenvalues and eigenvectors of $A = \begin{bmatrix} 2 & -2 & 3 \\ 1 & 1 & 1 \\ 1 & 3 & -1 \end{bmatrix}$

$$\diamond |A - \lambda I| = 0$$

$$\therefore \begin{vmatrix} 2 - \lambda & -2 & 3 \\ 1 & 1 - \lambda & 1 \\ 1 & 3 & -1 - \lambda \end{vmatrix} = 0$$

$$\therefore (2 - \lambda)[(1 - \lambda)(-1 - \lambda) - 3] + 2[1(-1 - \lambda) - 1] + 3[3 - (1 - \lambda)] = 0$$

$$\therefore \lambda^3 - 2\lambda^2 - 5\lambda + 6 = 0$$

Characteristic Equation for A

$\therefore \lambda = 1, 3, -2$ are the eigenvalues of A.

Other Method to find ch. eq. for 3*3 matrix

$$\diamond -\lambda^3 + S_1\lambda^2 - S_2\lambda + |A| = 0$$

Where $S_1 = \text{Trace } A$

$S_2 = \text{Sum of Minors of Diagonal Elements}$

$|A| = \text{Determinant of } A$

Other Method to find ch. eq. for 3*3 matrix

$$\diamond -\lambda^3 + S_1\lambda^2 - S_2\lambda + |A| = 0$$

Where $S_1 = \text{Trace } A$

$S_2 = \text{Sum of Minors of Diagonal Elements}$

$|A| = \text{Determinant of } A$

$$\diamond \text{ For } A = \begin{bmatrix} 2 & -2 & 3 \\ 1 & 1 & 1 \\ 1 & 3 & -1 \end{bmatrix}$$

Other Method to find ch. eq. for 3*3 matrix

$$\diamond -\lambda^3 + S_1\lambda^2 - S_2\lambda + |A| = 0$$

Where $S_1 = \text{Trace } A$

$S_2 = \text{Sum of Minors of Diagonal Elements}$

$|A| = \text{Determinant of } A$

$$S_1 = 2$$

$$\diamond \text{ For } A = \begin{bmatrix} 2 & -2 & 3 \\ 1 & 1 & 1 \\ 1 & 3 & -1 \end{bmatrix}$$

Other Method to find ch. eq. for 3*3 matrix

$$\diamond -\lambda^3 + S_1\lambda^2 - S_2\lambda + |A| = 0$$

Where $S_1 = \text{Trace } A$

$S_2 = \text{Sum of Minors of Diagonal Elements}$

$|A| = \text{Determinant of } A$

$$S_1 = 2$$

$$\diamond \text{ For } A = \begin{bmatrix} 2 & -2 & 3 \\ 1 & 1 & 1 \\ 1 & 3 & -1 \end{bmatrix}$$

Minor of $a_{11} = \text{Minor of } 2 = \text{remove the row and column in which it lies and find determinant}$

$$= \begin{vmatrix} 1 & 1 \\ 3 & -1 \end{vmatrix}$$

Other Method to find ch. eq. for 3*3 matrix

$$\diamond -\lambda^3 + S_1\lambda^2 - S_2\lambda + |A| = 0$$

Where $S_1 = \text{Trace } A$

$S_2 = \text{Sum of Minors of Diagonal Elements}$

$|A| = \text{Determinant of } A$

$$\diamond \text{ For } A = \begin{bmatrix} 2 & -2 & 3 \\ 1 & 1 & 1 \\ 1 & 3 & -1 \end{bmatrix}$$

$$S_1 = 2$$

$$S_2 = \begin{vmatrix} 1 & 1 \\ 3 & -1 \end{vmatrix} + \begin{vmatrix} 2 & 3 \\ 1 & -1 \end{vmatrix} + \begin{vmatrix} 2 & -2 \\ 1 & 1 \end{vmatrix}$$

Other Method to find ch. eq. for 3*3 matrix

$$\diamond -\lambda^3 + S_1\lambda^2 - S_2\lambda + |A| = 0$$

Where $S_1 = \text{Trace } A$

$S_2 = \text{Sum of Minors of Diagonal Elements}$

$|A| = \text{Determinant of } A$

$$\begin{aligned} \diamond \text{ For } A &= \begin{bmatrix} 2 & -2 & 3 \\ 1 & 1 & 1 \\ 1 & 3 & -1 \end{bmatrix} & S_1 &= 2 \\ & & S_2 &= \begin{vmatrix} 1 & 1 \\ 3 & -1 \end{vmatrix} + \begin{vmatrix} 2 & 3 \\ 1 & -1 \end{vmatrix} + \begin{vmatrix} 2 & -2 \\ 1 & 1 \end{vmatrix} \\ & & &= -5 \\ & & |A| &= -6 \end{aligned}$$

Other Method to find ch. eq. for 3*3 matrix

$$\diamond -\lambda^3 + S_1\lambda^2 - S_2\lambda + |A| = 0$$

Where $S_1 = \text{Trace } A$

$S_2 = \text{Sum of Minors of Diagonal Elements}$

$|A| = \text{Determinant of } A$

$$\begin{aligned} \diamond \text{ For } A &= \begin{bmatrix} 2 & -2 & 3 \\ 1 & 1 & 1 \\ 1 & 3 & -1 \end{bmatrix} \\ S_1 &= 2 \\ S_2 &= \begin{vmatrix} 1 & 1 \\ 3 & -1 \end{vmatrix} + \begin{vmatrix} 2 & 3 \\ 1 & -1 \end{vmatrix} + \begin{vmatrix} 2 & -2 \\ 1 & 1 \end{vmatrix} \\ &= -5 \\ |A| &= -6 \\ \therefore -\lambda^3 + 2\lambda^2 + 5\lambda - 6 &= 0 \\ \therefore \lambda^3 - 2\lambda^2 - 5\lambda + 6 &= 0 \end{aligned}$$

❖ $\lambda = 1, 3, -2$ are the eigenvalues of A.

For Each Eigenvalue, find eigenvector using

$$[A - \lambda I]X = 0$$

For $\lambda = 1$

$$\begin{aligned}
 &[A - I]X = 0 \\
 \therefore &\begin{bmatrix} 2 & -1 & -2 & 3 \\ 1 & 1 & -1 & 1 \\ 1 & 3 & -1 & -1 \end{bmatrix} \begin{bmatrix} x_1 \\ x_2 \\ x_3 \end{bmatrix} = 0
 \end{aligned}$$

Method 3: Algebraic equation

Rewriting in Equation form:

$$x_1 - 2x_2 + 3x_3 = 0$$

$$x_1 + x_3 = 0$$

$$x_1 + 3x_2 - 2x_3 = 0$$

n = no. of variable

= 3

r = no. of distinct

Equations/ Rank of

echelon

form

= 2

$\therefore n-r = 1$ LI eigenvector

For $\lambda = -2$

$$[A - (-2)I]X = 0$$

$$\therefore \begin{bmatrix} 2 - (-2) & -2 & 3 \\ 1 & 1 - (-2) & 1 \\ 1 & 3 & -1 - (-2) \end{bmatrix} \begin{bmatrix} x_1 \\ x_2 \\ x_3 \end{bmatrix} = 0$$

Method 3: Algebraic equation (Crammer's Rule)

Rewriting in Equation form:

$$4x_1 - 2x_2 + 3x_3 = 0$$

$$x_1 + 3x_2 + x_3 = 0$$

$$x_1 + 3x_2 + x_3 = 0$$

— — — — —

For $\lambda = 3$

$$[A - 3I]X = 0$$
$$\therefore \begin{bmatrix} 2-3 & -2 & 3 \\ 1 & 1-3 & 1 \\ 1 & 3 & -1-3 \end{bmatrix} \begin{bmatrix} x_1 \\ x_2 \\ x_3 \end{bmatrix} = 0$$

Use any method and find out eigenvector corresponding to $\lambda = 3$

Relation : $x_1 = x_2 = x_3$

\therefore Eigen vector corresponding to $\lambda = 3$ is $X = \begin{bmatrix} x_1 \\ x_2 \\ x_3 \end{bmatrix} = \begin{bmatrix} 1 \\ 1 \\ 1 \end{bmatrix}$

Practice Example

❖ *Eigen values of symmetric matrix are distinct and their corresponding eigenvectors are orthogonal.*

$$A = \begin{bmatrix} 1 & 0 & 0 \\ 0 & 3 & -1 \\ 0 & -1 & 3 \end{bmatrix}$$

Steps: 1. Find eigen values. (ans. 1,2,4)

2. Find corresponding eigenvectors (Say X_1, X_2, X_3).

Ans. $\begin{bmatrix} 1 \\ 0 \\ 0 \end{bmatrix}, \begin{bmatrix} 0 \\ 1 \\ 1 \end{bmatrix}, \begin{bmatrix} 0 \\ 1 \\ -1 \end{bmatrix}$

3. Prove that X_1, X_2, X_3 are orthogonal.

i.e. $X_1'X_2 = 0, X_1'X_3 = 0$ and $X_2'X_3 = 0$

Practice Example

- ❖ Find eigenvalues and eigenvectors of the matrix. Prove that eigenvectors are linearly independent.

$$A = \begin{bmatrix} 2 & -1 & 1 \\ 1 & 2 & -1 \\ 1 & -1 & 2 \end{bmatrix}$$

Steps: 1. Find eigenvalues. (ans. 1,2,3)

2. Find corresponding eigenvectors (Say X_1, X_2, X_3).

Ans. $\begin{bmatrix} 0 \\ 1 \\ 1 \end{bmatrix}, \begin{bmatrix} 1 \\ 1 \\ 1 \end{bmatrix}, \begin{bmatrix} 1 \\ 0 \\ 1 \end{bmatrix}$

3. Prove that X_1, X_2, X_3 are LI.

i.e. $K_1X_1 + K_2X_2 + K_3X_3 = 0 \Rightarrow K_1 = K_2 = K_3 = 0$

Ex.3 Find eigenvalues and eigenvectors of

$$A = \begin{bmatrix} 2 & 1 & 1 \\ 2 & 3 & 2 \\ 3 & 3 & 4 \end{bmatrix}$$

$$\diamond |A - \lambda I| = 0$$

$$\therefore \begin{vmatrix} 2 - \lambda & 1 & 1 \\ 2 & 3 - \lambda & 2 \\ 3 & 3 & 4 - \lambda \end{vmatrix} = 0$$

$$\therefore \lambda^3 - 9\lambda^2 + 15\lambda - 7 = 0$$

$\therefore \lambda = 1, 1, 7$ are the eigenvalues of A.

For $\lambda = 1$

$$[A - (1)I]X = 0$$

$$\therefore \begin{bmatrix} 2 - (1) & 1 & 1 \\ 2 & 3 - (1) & 2 \\ 3 & 3 & 4 - (1) \end{bmatrix} \begin{bmatrix} x_1 \\ x_2 \\ x_3 \end{bmatrix} = 0$$

$$R2-2R1, R3-3R1 \Rightarrow \begin{bmatrix} 1 & 1 & 1 \\ 0 & 0 & 0 \\ 0 & 0 & 0 \end{bmatrix} \begin{bmatrix} x_1 \\ x_2 \\ x_3 \end{bmatrix} = 0$$

$$\therefore x_1 + x_2 + x_3 = 0$$

$$\therefore x_1 = -x_2 - x_3$$

Put $x_2 = s$; $x_3 = t \Rightarrow \therefore x_1 = -s - t$

\therefore Eigen vector corresponding to $\lambda = 1$ are $\begin{bmatrix} -1 \\ 0 \\ 1 \end{bmatrix}$ & $\begin{bmatrix} -1 \\ 1 \\ 0 \end{bmatrix}$

n = no. of variable
= 3
 r = no. of distinct
Equations/ Rank of echelon
form
= 1
 $\therefore n-r = 2$ LI eigenvector

For $\lambda = 7$

$$[A - (7)I]X = 0$$

$$\therefore \begin{bmatrix} 2 - (7) & 1 & 1 \\ 2 & 3 - (7) & 2 \\ 3 & 3 & 4 - (7) \end{bmatrix} \begin{bmatrix} x_1 \\ x_2 \\ x_3 \end{bmatrix} = 0$$

$$\therefore \begin{bmatrix} -5 & 1 & 1 \\ 2 & -4 & 2 \\ 3 & 3 & -3 \end{bmatrix} \begin{bmatrix} x_1 \\ x_2 \\ x_3 \end{bmatrix} = 0$$

$$(\frac{1}{2})R_2, (1/3)R_3 \Rightarrow \begin{bmatrix} -5 & 1 & 1 \\ 1 & -2 & 1 \\ 1 & 1 & -1 \end{bmatrix} \begin{bmatrix} x_1 \\ x_2 \\ x_3 \end{bmatrix} = 0$$

$$R_3 - R_2 \Rightarrow \begin{bmatrix} -5 & 1 & 1 \\ 1 & -2 & 1 \\ 0 & 3 & -2 \end{bmatrix} \begin{bmatrix} x_1 \\ x_2 \\ x_3 \end{bmatrix} = 0$$

$$\therefore x_3 = \frac{3}{2}x_2 \text{ \& } x_1 = \frac{1}{2}x_2$$

n = no. of variable

= 3

r = no. of distinct

Equations/ Rank of echelon form

= 2

$\therefore n - r = 1$ LI eigenvector

\therefore Eigen vector corresponding

to $\lambda = 7$ is $\begin{bmatrix} 1 \\ 2 \\ 3 \end{bmatrix}$

Practice Example

❖ Find eigenvalues and eigenvectors of

$$A = \begin{bmatrix} \frac{1}{3} & \frac{2}{3} & \frac{2}{3} \\ \frac{2}{3} & \frac{1}{3} & -\frac{2}{3} \\ \frac{2}{3} & -\frac{2}{3} & \frac{1}{3} \end{bmatrix} = \frac{1}{3} \begin{bmatrix} 1 & 2 & 2 \\ 2 & 1 & -2 \\ 2 & -2 & 1 \end{bmatrix}$$

Prove that corresponding eigenvectors are Linearly Independent.

Ans: 1, 1, -1 $\begin{bmatrix} 1 \\ 1 \\ 0 \end{bmatrix}, \begin{bmatrix} 1 \\ 0 \\ 1 \end{bmatrix}, \begin{bmatrix} -1 \\ 1 \\ 1 \end{bmatrix}$

Ex.4 Find eigenvalues and eigenvectors of

$$A = \begin{bmatrix} -3 & -9 & -12 \\ 1 & 3 & 4 \\ 0 & 0 & 1 \end{bmatrix}$$

$$\diamondsuit |A - \lambda I| = 0$$

$$\therefore \begin{vmatrix} -3 - \lambda & -9 & -12 \\ 1 & 3 - \lambda & 4 \\ 0 & 0 & 1 - \lambda \end{vmatrix} = 0$$

$$\therefore \lambda^3 - \lambda^2 = 0$$

$\therefore \lambda = 0, 0, 1$ are the eigenvalues of A.

For $\lambda = 0$

$$[A - 0I]X = 0$$

$$\therefore \begin{bmatrix} -3 & -9 & -12 \\ 1 & 3 & 4 \\ 0 & 0 & 1 \end{bmatrix} \begin{bmatrix} x_1 \\ x_2 \\ x_3 \end{bmatrix} = 0$$

$$\therefore x_3 = 0$$

$$x_1 + 3x_2 + 4x_3 = 0$$

$$\therefore x_1 + 3x_2 = 0 \Rightarrow x_1 = -3x_2$$

$$\therefore \text{Eigen vector corresponding to } \lambda = 0 \text{ is } \begin{bmatrix} -3 \\ 1 \\ 0 \end{bmatrix}$$

For $\lambda = 1$

$$\text{Check: Eigen vector corresponding to } \lambda = 1 \text{ is } \begin{bmatrix} -12 \\ 4 \\ 1 \end{bmatrix}$$

n = no. of variable
= 3

r = no. of distinct
Equations/ Rank of echelon
form

$$= 2$$

$$\therefore n-r = 1 \text{ LI eigenvector}$$

Practice Example

❖ Find eigenvalues and eigenvectors of

$$A = \begin{bmatrix} 3 & -9 & -12 \\ 1 & 3 & 4 \\ 0 & 0 & 1 \end{bmatrix}$$

$$\text{Ans: } 1, 3+i, 3-i \quad \begin{bmatrix} 12 \\ 4 \\ -1 \end{bmatrix}, \begin{bmatrix} 3i \\ 1 \\ 0 \end{bmatrix}, \begin{bmatrix} -3i \\ 1 \\ 0 \end{bmatrix}$$

Practice Example

❖ Find eigenvalues and eigenvectors of

$$A = \begin{bmatrix} 4 & 6 & 6 \\ 1 & 3 & 2 \\ -1 & -5 & -2 \end{bmatrix}$$

Prove that corresponding eigenvectors are Linearly Independent.

$$\text{Ans: } 1, 2, 2 \begin{bmatrix} 4 \\ 1 \\ -3 \end{bmatrix}, \begin{bmatrix} 3 \\ 1 \\ -2 \end{bmatrix}$$

Ex 5. Find eigenvalues and eigenvectors of

$$A = \begin{bmatrix} 0 & 1 & 0 \\ 0 & 0 & 1 \\ 1 & -3 & 3 \end{bmatrix}$$

$$\diamondsuit |A - \lambda I| = 0$$

$$\therefore \begin{vmatrix} -\lambda & 1 & 0 \\ 0 & -\lambda & 1 \\ 1 & -3 & 3 - \lambda \end{vmatrix} = 0$$

$$\therefore \lambda^3 - 3\lambda^2 + 3\lambda + 1 = 0$$

$$\therefore \lambda = 1, 1, 1 \text{ are the eigenvalues of } A.$$

For $\lambda = 1$ $[A - I]X = 0$

$$\therefore \begin{bmatrix} -1 & 1 & 0 \\ 0 & -1 & 1 \\ 1 & -3 & 2 \end{bmatrix} \begin{bmatrix} x_1 \\ x_2 \\ x_3 \end{bmatrix} = 0$$

$$R3+R1 \Rightarrow \begin{bmatrix} -1 & 1 & 0 \\ 0 & -1 & 1 \\ 0 & -2 & 2 \end{bmatrix} \begin{bmatrix} x_1 \\ x_2 \\ x_3 \end{bmatrix} = 0$$

$$R3-2R2 \Rightarrow \begin{bmatrix} -1 & 1 & 0 \\ 0 & -1 & 1 \\ 0 & 0 & 0 \end{bmatrix} \begin{bmatrix} x_1 \\ x_2 \\ x_3 \end{bmatrix} = 0$$

$$\therefore x_2 = x_3 \text{ \& }$$

$$\therefore x_1 = x_2$$

\therefore Eigen vector corresponding to $\lambda = 1$ is $\begin{bmatrix} 1 \\ 1 \\ 1 \end{bmatrix}$

n = no. of variable

$$= 3$$

r = no. of distinct

Equations/ Rank of echelon
form

$$= 2$$

$$\therefore n-r = 1 \text{ LI eigenvector}$$

Practice Example

❖ Find eigenvalues and eigenvectors of

$$A = \begin{bmatrix} -3 & 0 & 0 \\ 0 & -3 & 0 \\ 0 & 0 & -3 \end{bmatrix}$$

Note:

- Eigenvalues of the diagonal matrix are its diagonal elements.
- Eigenvalues of the triangular matrix are its diagonal elements.

Ans. ???

Remember

- ❖ Eigenvectors are *non-zero column vectors*. Eigenvectors are Linearly independent. (check for the above example)
- ❖ Eigenvalues may be equal to zero.
- ❖ Eigenvalues are for the given matrix unique but not eigenvectors.
- ❖ If X is eigenvector of A corresponding to some eigenvalue λ , then any non-zero multiple of X is also an eigenvector for same λ .
- ❖ The Sum of Eigenvalues = Trace of Matrix
- ❖ Product of the eigenvalues = determinant of matrix

Ex.6 Find sum and product of eigenvalues of

$$A = \begin{bmatrix} 8 & -6 & 2 \\ -6 & 7 & -4 \\ 2 & -4 & 3 \end{bmatrix}$$

❖ Sum of Eigen values = Trace of A
= sum of diagonal elements
= 18

❖ Product of Eigen values = determinant of A
= $|A|$
= $8(21-16) + 6(-18+8) + 2(24-14)$
= 0

Ex.6 Two eigenvalues of a 3×3 matrix are -1,2 and if determinant of a matrix is 4, find its third eigenvalue.

❖ Let the third eigenvalue is x.

Product of Eigen values = determinant of A

$$(-1)(2)(x)=4$$

$$x = -2$$

Ex. If $A = \begin{bmatrix} \sin x & \operatorname{cosec} x & 1 \\ \sec x & \cos x & 1 \\ \tan x & \cot x & 1 \end{bmatrix}$ then there does not
exists a rela value of x for which characteristic roots are
 $-1, 1 \& 3$

Open for discussion

Think

- ❖ If a matrix A is singular then one of the eigenvalue of A must be?
 - Hint: Singular Matrix means its determinant is zero.
 - Ans: zero (Justify)
- ❖ If Two eigenvalues of 3×3 matrix are $-1, 2$ and determinant of matrix is 4 then the third eigenvalue is.....?
 - Hint : product of e.value= $(-1)(2)(x)=4$
 - Ans: -2

Think

❖ If $A = \begin{bmatrix} 2 & 4 & 9 \\ 0 & 6 & 8 \\ 0 & 0 & 5 \end{bmatrix}$ then eigenvalues of A are....

➤ Hint: Triangular Matrix

➤ Ans: 2, 6, 5

Eigenvalues of a triangular matrix are its diagonal elements.

❖ Eigenvalues of diagonal matrix?

➤ Ans: its diagonal elements

Note:

- ❖ If a matrix A is singular then one of the eigenvalue of A must be zero.
- ❖ Eigenvalues of a triangular matrix are its diagonal elements.
- ❖ Eigenvalues of diagonal matrix are its diagonal elements.
